

TITLE: GCN GRB OBSERVATION REPORT  
NUMBER: 4890  
SUBJECT: GRB 060319 optical observations at TNG  
DATE: 06/03/19 05:26:19 GMT  
FROM: Paolo D'Avanzo at INAF-OAB <davanzo@merate.mi.astro.it>

P. D'Avanzo (INAF-OAB), G.L. Israel (INAF-OARm) R. Cosentino (TNG) report  
on behalf of a larger collaboration:

We observed the field of GRB 060319 (Ziaee pour et al., GCN 4885) with the  
3.6 m TNG italian telescope sited in Canary Island equipped with the DOLORES  
camera. We performed five minutes of R-band imaging, starting on March 19.16 UT  
(about 3 hours after the burst).

We do not find any new source inside the XRT error box ((Kennea et al.,  
GCN 4886) up to a magnitude limit of  $R > 23$  (3sigma confidence) with  
respect to the USNOB1 catalog.
